1990

Department of Government Services

91-07143/

Nova Scotia

ANNUAL REPORT

Department of Government Services

The Honourable
Lloyd R. Crouse, P.C.
Lieutenant Governor
Province of Nova Scotia

May It Please Your Honour

I respectfully submit, herewith, the annual report of the Department of Government Services for the fiscal year ending March 31, 1990.

I have the honour to be, Sir
Your Obedient Servant,

Terence R.B. Donahoe, Q.C.
Minister

Nova Scotia

The Honourable
Terence R.B. Donahoe, Q.C.
Minister, Department of
Government Services
Province of Nova Scotia

Sir

I hereby present to you the annual report for the Department of Government Services for the fiscal year ending March 31, 1990.

Respectfully Submitted,

D.D. Hiltz
Deputy Minister

CONTENTS

9 The Department of Government Services

11 Design and Construction Services

15 Finance and Administration

19 Property and Operation Services

27 Systems and Computer Services

Tenders Awarded

31 Design and Construction Services

34 Property and Operation Services

44 Systems and Computer Services

THE DEPARTMENT OF GOVERNMENT SERVICES

Daily Support Services

> provides the daily support services to all government departments, agencies, boards commissions, Crown corporations and the Legislature

> provides these services directly or through contracts with private sector suppliers in the most efficient and cost-effective manner

> operates as the government's landlord in providing accommodations, property maintenance and security services

> develops a wide range of creative information products for public and internal information programs

> acquires certain furniture, equipment and other supplies required by departments

> provides for the interdepartmental delivery of mail and other goods

> disposes of Crown property

> administers a government-wide insurance and risk-management program

> provides stationery and office supplies as well as records storage and inventory controls

> operates the provincial data and micrographics centres.

The Department of Government Services offers other government departments a diverse array of professional and technical expertise. This expertise is contained in four major divisions—Design and Construction Services, Finance and Administration, Property and Operation Services, and Systems and Computer Services.

This group of about 650 employees located throughout Nova Scotia provides government with much of what is required to operate smoothly—from stationery to buildings, from couriers to telecommunications systems. The department also connects other government departments to private sector services such as architectural, creative, construction, and software development services. In these situations, our expertise is used to monitor the services provided.

DESIGN AND CONSTRUCTION SERVICES

Building for Tomorrow

> provides architectural and construction management services for construction and alterations to all government buildings

> provides architectural conception, evaluation, and design work for construction projects, either directly or through the private sector

> supervises the developmental phases of building projects

> supervises tender calls and all aspects of contract administration

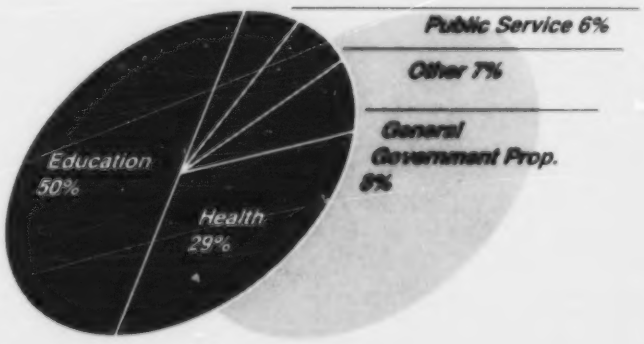
> renovates, alters, and repairs existing buildings

> provides consulting services for installation, operation, and repair of specialized structural, mechanical, electrical, and allied engineering facilities for all government departments

> provides engineering and technical resources for design, construction, operation, and maintenance of all government-owned buildings.

When government is called upon to provide facilities, Design and Construction architects, engineers, and project managers are on site, guiding the work and providing technical support. They also build and renovate office buildings for government use.

Capital Construction Expenditure by Department



Overview

The division is divided into four sections, each providing expertise in a different area of building construction.

The **Architectural Services** section provides architectural conception, evaluation, and design work for construction projects, either directly or through the private sector. This section schedules projects during the design and tender stages of projects.

Providing engineering and technical resources for construction and maintenance of government buildings is the role of the **Engineering Services** section. Staff in this section also approve mechanical and electrical designs prepared by private sector consultants, and provide consulting services on specialized structural, mechanical, electrical, and allied engineering facilities for government.

Renovations, alterations, and repairs to government buildings are carried out by the **Construction Services** section. This section also manages construction on small projects designed by Architectural Services staff.

The **Project Management** section is responsible for all aspects of major capital construction projects such as schools and hospitals.

The division managed 53 major capital projects in 1989–90, with a total estimated value of $336,216,000 under design. Design was completed, tenders called, and construction contracts awarded on 18 capital projects, valued at $68,040,157. Construction continued on 33 major capital projects from the previous year, valued at $119,490,621, and 31 major capital projects, valued at $67,140,134, were completed.

Highlights and New Initiatives

> Major renovations were begun on the Annapolis Royal Regional Academy. This project is a good example of the successful application of modern building techniques to the restoration of an historic building. Work is expected to be finished in the fall of 1990.

> Design work was under way for the construction of three major health care facilities: the Halifax Infirmary, the Cape Breton Regional Hospital, and the Aberdeen Hospital. These facilities represent a total estimated value of $234 million.

FINANCE AND ADMINISTRATION

Financial and Human Resource Managers

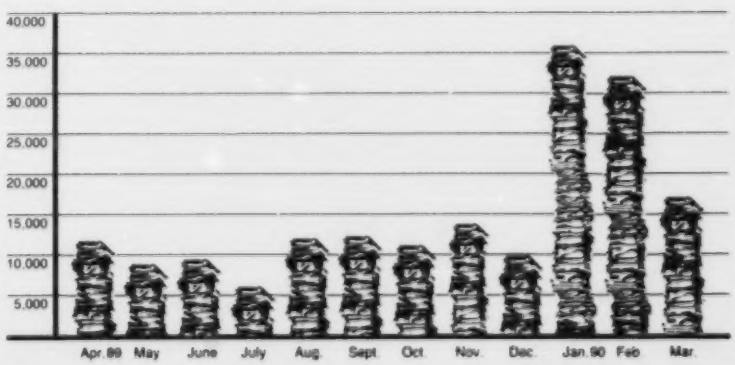
- provides financial, administrative, and personnel services for the entire Department
- provides accounting and financial reporting services
- processes financial transactions
- coordinates budgets with other divisions
- develops and implements human resource management matters
- administers employee compensation
- monitors performance appraisals, as well as organizational reviews and development
- implements and manages the Department's Records Management Program through the Central Registry
- manages use of space, equipment acquisitions, and furniture inventory records for the Department.

Timely and accurate recording, controlling, and reporting of financial and human resource activities is essential to any organization. In the Department of Government Services, the Finance and Administration Division provides this service through three sections: Financial Services, Administrative Services, and Personnel Services.

Activity in Finance and Administration is directly related to the level of service provided by other divisions of the Department.

The Department's net budget for 1989-90 was $43,680,000. This amount, while significant, represents only part of the Department's activities. Gross expenditures totalled $95,050,400, of which $51,370,400 was charged to the government departments and agencies who used the various services provided by the Department.

Central Registry Statistics 1989-90



Overview

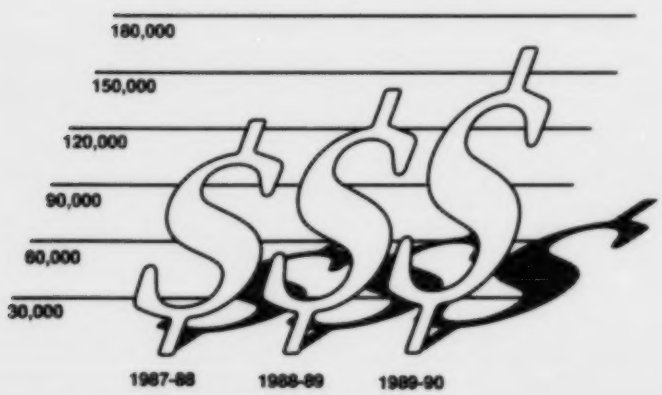
Financial Services staff paid more than 160,000 invoices in 1989–90, a 16 per cent increase over the previous year. During the year, the data entry verification process was decentralized to user departments from the Department of Finance. Financial Services staff are now responsible for virtually all aspects of invoice processing, except for cheque issuance.

Administrative Services includes the Central Registry, facsimile facilities, the internal delivery and collection of mail, secretarial services, departmental switchboard, and the procurement of stationery and sundry supplies. By year-end, Records Management staff had processed 179,019 documents. Requests for files totalled 8,009, an average of 30 requests per day, and 3,273 records were created during the year. As of March 31, 1990, 14,599 files were located in the Registry.

Administrative Services again coordinated collection of out-of-date Nova Scotia Government Directories and Maritime Tel and Tel Directories. Approximately 4 600 kg of paper was collected for recycling.

Personnel Services is responsible for recruiting and developing an effective workforce. Staff coordinated the selection and appointment of 51 civil service positions, including 11 promotions from within Government Services. The Department participated in the Employment Program for Persons with Disabilities, the Co-operative Education Program, and the Apprenticeship Program. Four permanent and one casual Affirmative Action candidates were hired.

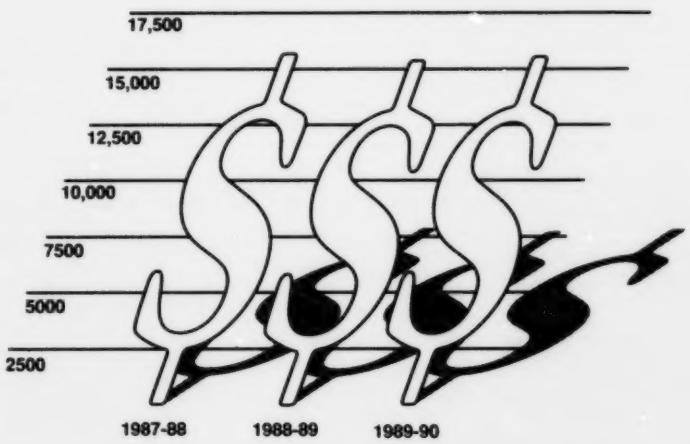
Invoices



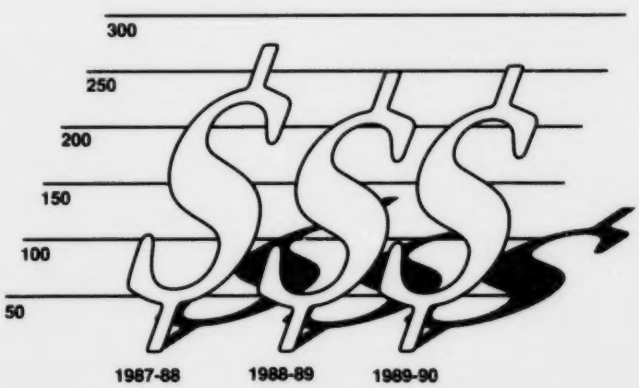
Training and development of staff continued to be a priority for the Department, with expenditures totalling $30,488. Management and supervisory development programs accounted for 36 per cent of expenditures; communication skills, 12 per cent; technical and professional enhancement, 32 per cent; health and safety and miscellaneous courses, 12 per cent; and specific degree-related programs, 4 per cent.

Personnel Services staff counsel management and staff on many relevant and sensitive topics. The section also communicates with the Civil Service Commission, Management Board, departments, and external organizations on human resource issues.

Purchase Requisitions



Cash Reports



Highlights and New Initiatives

> The Project Accounting and Management System was implemented this year. This enhancement to the financial management system has provided management and user departments with more detailed information on financial transactions. Future updates to the system include the addition of project accounting for capital transactions.

> The Management Planning and Budgeting System was decentralized to the Department's operating managers. These budget subject managers were directly involved in budget planning in September 1990. A Budget Control Officer has been added to coordinate and monitor information provided by operating divisions.

> A training needs survey, which identified areas of interest and need, helped establish priorities and use funds more effectively. An in-depth needs assessment will be based on the results of the survey.

> Personnel staff hired speakers to address topics of importance to Department employees and established an in-house training library, which has proved useful to many employees.

> Government Services was part of the second group of departments to convert its human resources records from a manual system to the Human Resource Management System. Training and program enhancement have continued since the initial conversion of information in June 1989.

PROPERTY AND OPERATION SERVICES

Providing for Government's Daily Needs

- acquires and manages all government-owned and government-rented facilities under the direction of the Space Utilization Committee
- provides or obtains the expertise in planning the layout and design of premises to ensure space is properly utilized
- disposes of surplus crown assets, including real property
- acquires real property for client departments
- provides custodial services, elevator maintenance, refuse and snow removal, and other day-to-day preventive and corrective maintenance
- provides technical consultant services
- relocates government departments
- monitors, verifies, warehouses, and redistributes capital assets
- repairs, refinishes, or upholsters furniture and equipment
- provides a central stationery supply service
- provides a records storage, retrieval, and disposal centre
- provides a means of recycling discarded government paper through the private sector
- provides government with mail and messenger services
- operates a government-wide insurance and risk management program.
- develops a wide range of creative information products, such as brochures, posters, forms, and annual reports for public and internal information programs for all branches of government
- provides creative design, editing and writing, typesetting, publishing, and printing services for these information programs either directly or through the private sector
- provides design, panel photography, illustrations, graphics, silk screening, and custom displays and exhibits for all government departments to enable them to participate in trade shows, special events, and window displays

Overview

Government cannot work effectively unless it has the proper accommodations and equipment to carry out its day-to-day activities. Property and Operation Services ensures the efficient operation of government through six sections: Building Services, Property Services, Operation Services, Insurance and Risk Management, Publishing, and the Queen's Printer.

The wide range of responsibilities requires a cohesive effort on the part of staff to ensure that client departments are getting the best value for their money. By centralizing the common services provided to government, such as the Stationery Stockroom, direct costs are reduced.

One of government's most important challenges is to communicate effectively with the public it serves. Publishing and the Queen's Printer carry out this responsibility. In-house staff work closely with the private sector to ensure the client department's budget and a high standard of quality are met on each project. As government's information needs change, services are improved and expanded.

Building Services' main function is the efficient operation of 18 buildings across the province. This includes staffing the buildings with competent superintendents, caretakers, janitors, and commissionaires.

Preventive maintenance is the key to successfully maintaining these buildings. Building Services staff tender, award, and monitor service contracts from the private sector for heating, ventilation, and air conditioning systems; boilers; elevators; fire and burglar alarms; snow removal; and landscaping. The section also administers service contracts for other government departments. Staff prepare operating budgets for other departments for elevators; heating, ventilation, and air conditioning controls; boilers; and fire alarm services.

Over the past year, staff improved the preventive maintenance program. Additional staff have been hired for firetender duties and a successful training program for building operators was carried out.

Building Services' role in determining training requirements for building operators led to a successful pilot project involving 12 building operators,

in Transportation and Communications and Lands and Forests buildings.

Property Services is responsible for administering lease obligations between government and landlord. The Department oversees 301 leasehold properties or 1,493,707 square feet of space.

In addition to acquiring space, this section also disposes of real property surplus to government. Property Services called tenders for, and disposed of, 22 surplus properties.

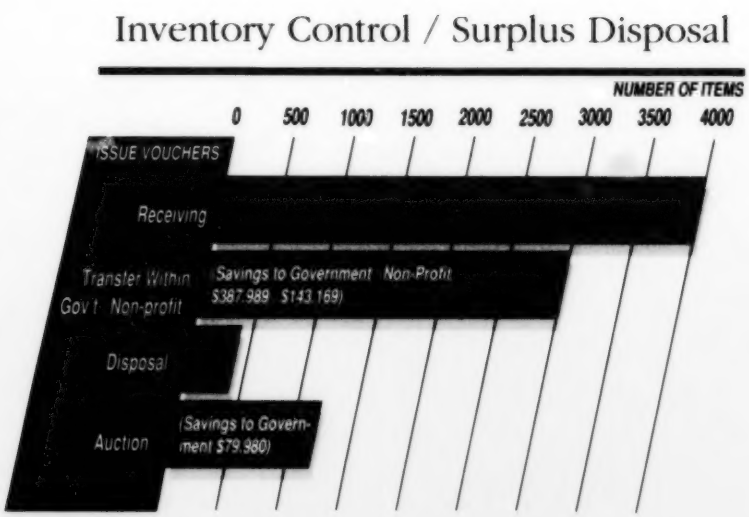
Operation Services comprises four independent operations. It also manages the Department's fleet of vehicles.

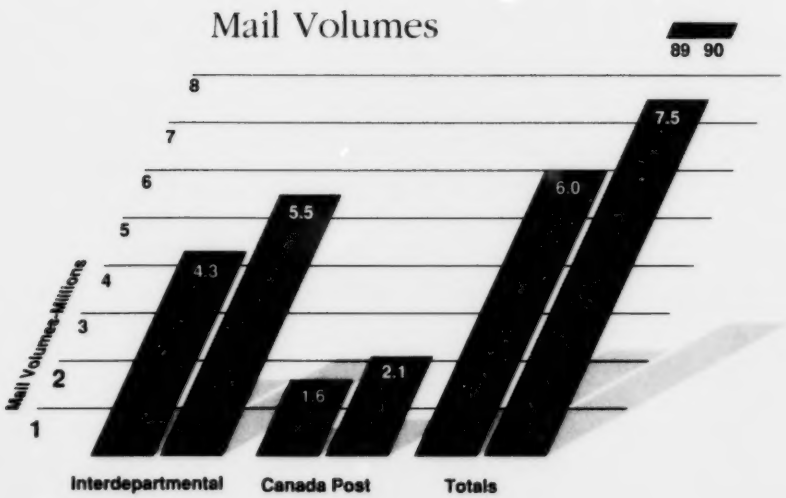
The centralized Stationery Stockroom provides a stationery supply service to government departments, boards, commissions, and agencies. Bulk purchasing saves money in purchases and storage space. In the past year, stockroom staff processed 13,000 client orders valued at $2,074,000. About 650,000 stationery items were issued, a decrease of 8 per cent over 1988-89.

The Provincial Records Centre stored 20,700 cartons or 1,033,050 files during 1989-90. In addition to recycling paper resulting from destruction of outdated files, Records Centre staff are recycling waste paper generated by staff of seven departments. The pilot project is managed by the Department of the Environment. Paper is sorted into seven different types and shredded, baled, and sold to a recycling company. In the first 10 months of this project, staff recycled 110 tons of paper, representing 1,874 trees that would otherwise have been harvested.

This year the Sydney satellite inventory warehouse continued to expand into a regional records storage facility to accommodate the Cape Breton region.

The Inventory Control section verifies the capital asset inventories submitted by various departments. It also provides departments with information and services to maximize their use of surplus capital assets. The section requisitioned and verified delivery of capital assets for 13 new school projects and the Museum of Industry and Technology, and coordinated all aspects of new systems furniture installations within 13 government departments. Furniture and equipment installed totalled more





than $4.8 million, down from last year's $6.6 million in 26 capital projects. The resulting surplus capital assets filled many requests for furniture and equipment.

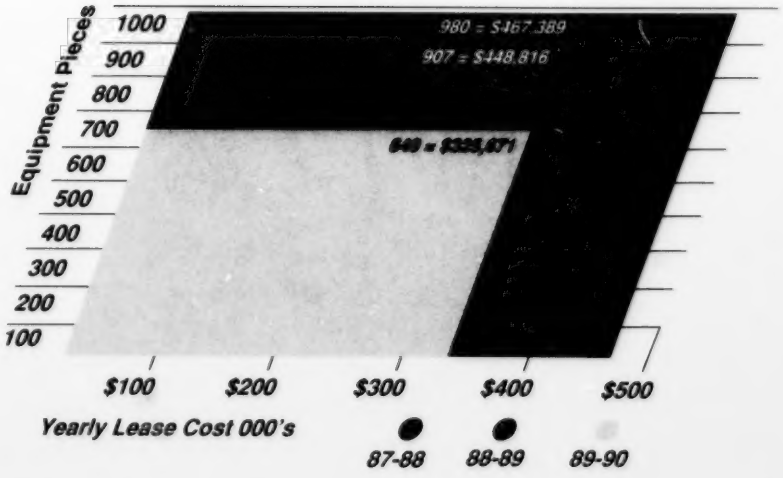
The redistribution of capital assets within government has saved government about $360,000 for furniture and equipment. Nonprofit or charitable organizations received approximately $143,000 worth of surplus assets.

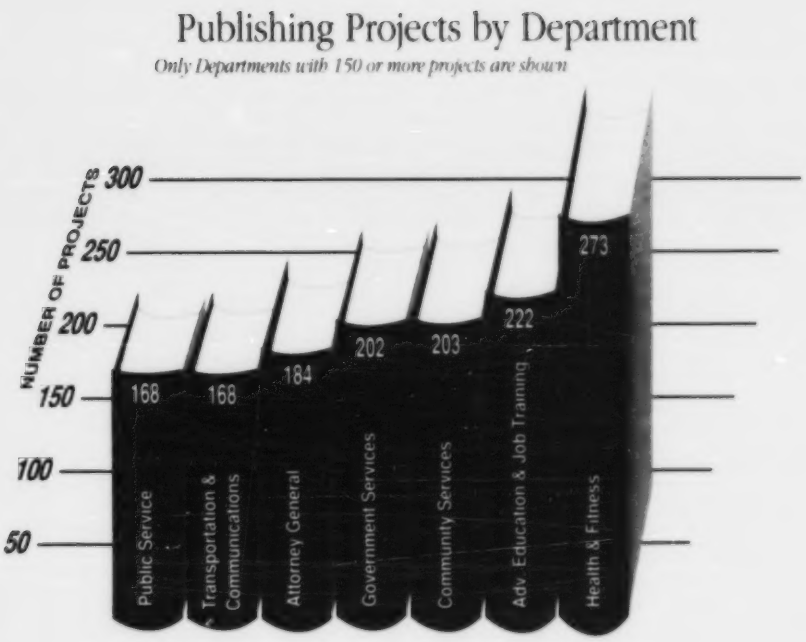
The Postal Services Branch moved to 1680 Granville Street in the fall of 1989. It acquires all postal equipment needed throughout government. It has undertaken programs that will save money in all areas of government postal services such as courier contracts, postal equipment service contracts, bulk mailing programs, privatization of some programs, and determining to what extent envelopes and forms must be standardized to qualify for Canada Post's incentive rates.

Insurance and Risk Management administered 194 insurance policies (28 for this department and 166 for other departments, boards, agencies and commissions) during

1989–90. These policies protect against the risk of major financial loss to the Province on owned and leased property and equipment, specialized computer equipment, elevators, boilers, machinery, motor vehicle liability, and aviation, marine, accident, and bonding exposures. The Department's insurance, which was purchased through local provincially licensed brokers and insurance companies, cost $1,109,655. Insured values have increased 3.5 per cent over the last year, while premium costs increased 0.04 per cent for the same period.

Postal Equipment Throughout Government





The **Publishing** section produced about 2,562 projects, valued at over $5 million. Desktop publishing equipment was installed in the graphic and editorial sections. This equipment allowed publishing staff to gain a better understanding of the best uses of this technology and permitted expanded use of private sector DTP shops.

Publishing staff initiated a change to recycled paper for standard Visual Identity Program stationary for all departments, commissions, and agencies.

The cost of printing small-quantity orders of stationary will be reduced since the Province placed standing orders with several printers across Nova Scotia. This move allows the printers to plan ahead for the most cost- and time-efficient printing.

Exhibits and Displays produced work for trade shows around the province, across Canada and in the United States. Projects for 1989–90 were valued at over $177,000.

Highlights and New Initiatives

> A very successful Phase Two of our Building Superintendents' and Operators' course, which the participants greatly appreciated, took place in May.

> Construction and expansion of the Northumberland Golf Course was completed this year.

> Building Services expanded its program into the area of building management services. Staff now oversee the operation of the Art Gallery of Nova Scotia, which is maintained by personnel provided under contract by the private sector. The Department of Transportation building at Miller Lake is maintained by Building Services personnel.

> Property and Operation Services is establishing, in cooperation with the Purchasing Agency, standard specifications for the acquisition of systems-type chairs. This centralized approach will result in cost savings.

> The Postal Services Branch handled 7.5 million pieces of Canada Post and interdepartmental mail in 1989–90, an increase of 25 per cent over last year. The courier to Sydney and Yarmouth increased its yearly volume by 11 per cent to 18,142 items. The number of individual accounts increased by 53 per cent to 230. Postal services staff stamped mail for 150 accounts at an approximate cost of $843,475.

> The Postal Services Branch eliminated 258 pieces of leased and rented postal equipment across the Province, which represents a 28 per cent reduction from last year. This resulted in a net savings of $123,145.

> The implementation of a province-wide next-day courier is expected to reduce government courier costs by up to 50 per cent for some departments.

> The Provincial Records Centre will be used as a depot for recycling paper products as part of the government's recycling initiative.

> *The Bench*, a history of the provincial courts and their judges, was published to mark the 50th anniversary of the provincial courts.

> Publication of *Houses of Nova Scotia*, a co-publishing project involving a private sector publisher and the Nova Scotia Museum, was managed by Publishing staff.

> The exhibits staff designed and installed an interpretive display for the Ship Harbour Aquaculture Centre. The display contains an aquarium and a video display. Graphics, photos, and display modules help the centre's visitors to better understand the aquaculture industry.

> Exhibits staff contributed to the annual lighting of the Boston Christmas Tree by creating an installation for a video explaining the Halifax Explosion. Every year, the Province sends the city a Christmas tree to thank Bostonians for the medical aid and supplies their ancestors sent after the explosion on December 6, 1917.

> The Queen's Printer published the *Revised Statutes of Nova Scotia*. The last revision was printed 22 years ago.

SYSTEMS AND COMPUTER SERVICES

Information Technology Providers

- provides centralized delivery of data processing, micrographics, and telecommunications services
- manages and operates government's shared information processing facilities including the Provincial Data Centre, Micrographics Centre, and the Data Communications Network
- provides operational support, guidance, and assistance and acquires equipment for the above services
- develops information systems plans and defines system requirements
- develops computer systems to operate on government's central computers
- supports and maintains central systems
- prepares and manages tenders for studies, equipment acquisition, and contracted system development
- provides data administration
- arranges installation, relocation, and rearrangement of equipment and telecommunication lines.

Systems and Computer Services responds to government's data processing, micrographics, and telecommunications needs. It provides operational support and guidance and assists departments and agencies acquiring equipment and services.

Staff from Client Services, Computer Services, Systems Development and Support, and Telecommunications Services—the division's four sections—work closely with personnel in other departments, determining their systems needs and helping them learn to use their new systems.

Systems and Computer Services personnel also work closely with Management Board staff to establish policies for acquiring data processing services and equipment. Staff contribute to the Electronic Data Processing Advisory Committee's review of departments' long-range systems plans and equipment and service requests. The committee monitors and controls acquisition and implementation of automated systems in the provincial government.

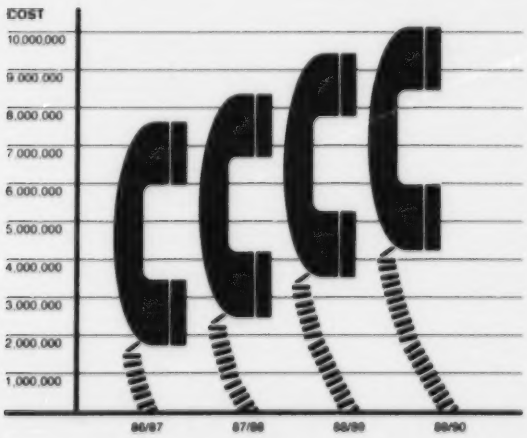
Overview

Client Services staff guide departments that are developing information systems and trying to define their requirements. This section also manages tenders for studies and equipment acquisitions. The number of tender calls increased to 281 from 213. However, the value of tenders awarded decreased to $4,330,175 from $4,448,805. The value of contracted systems consulting and development services increased significantly to $2,664,493 from $1,707,696.

Systems Development and Support manages the development of computer systems for client departments that will operate at the central computing site. Much of the work this year was a continuation of multi-year projects including the Human Resource Management System, the central database for the Department of Education, the National Safety Code for the Registry of Motor Vehicles, and the vehicle tax collection system for the Department of Finance.

The **Telecommunications Services** section manages government's telecommunications requirements. Section staff continued to focus on modernizing government's telephone systems, thereby controlling costs and improving services to users.

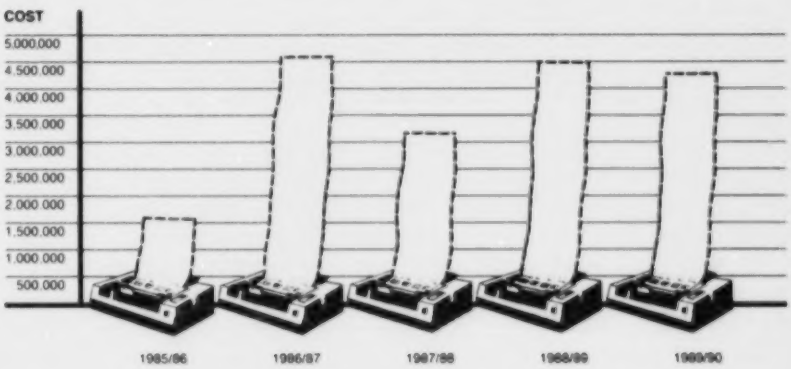
Telecommunications Costs



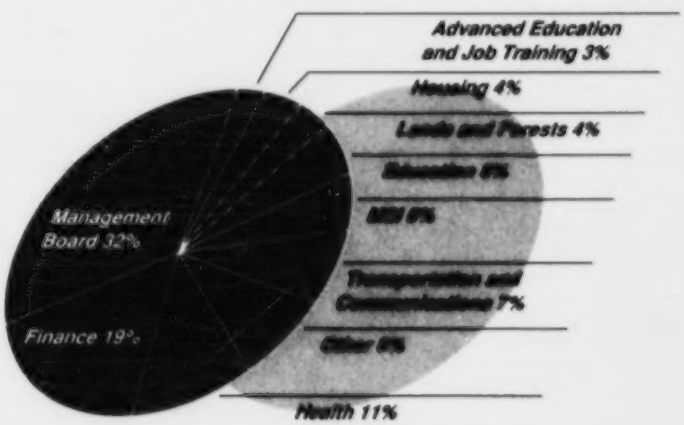
By the end of the year digital centrex service was available in Halifax-Dartmouth, Sydney, and Truro to about 5,500 users. This system provides government with modern, cost-effective telecommunications services and features. Plans were under way to expand centrex service to five more centres in Nova Scotia in 1990–91.

Several sites received new integrated voice and data wiring systems by the end of the year. These systems will reduce installation and rearrangement costs and will allow users to relocate their own telephones and computer terminals as needed without waiting for suppliers' technicians to perform the work.

Computer Capital Equipment Acquisitions



SCS Personnel Utilization by Client



Highlights and New Initiatives

> Expansion of applications running at the computer centre and anticipated growth led to a planned upgrade of computing resources. In January 1990, the 3090-300E was upgraded to a model 400J.

> In addition to the growth at the central site, the number of remote terminals connected to the central location doubled to about 1,500 devices. Intelligent network processors were installed and upgraded across the province to make communications more efficient and cost-effective.

> Staff developed a central registry system that may be used in several government departments and designed the Wholesale Gasoline Tax Collection System for the Department of Finance.

> Staff also studied ways to increase their efficiency and cost-effectiveness. They developed a programmer training curriculum, evaluated a methodology for systems development, and installed a new long distance billing system for Telecommunications Services.

> Phase One of the new Telecommunications Information Management system was completed. This system provides better management and analysis tools for Telecommunications Services personnel. It enhances management, cost control, and service facilities available to government users. Plans to integrate the cost allocation subsystem with the finance department's general ledger system should be complete next year. Phase Two, implementing inventory, work order, and problem-tracking subsystems, will probably be completed in the 1991–92 fiscal year.
